## Mundurucu terms with arithmetical, geometrical and spatial content

Pierre Pica, Véronique Izard, Stanislas Dehaene \& Elizabeth Spelke

The following list of words (revised September 2015), established with the help of several informants who are native speakers of Mundurucu, updates the list published as Supplementary Online Materials in Dehaene, Izard, Pica, \& Spelke (2006), Core knowledge of geometry in an Amazonian indigene group, Science, 311(5759), 381-384. ${ }^{1}$

## 1. Arithmetical terms

### 1.1. Number words ${ }^{2}$

| pũg ma <br> one-FOC | One (literally: "exactly one") |
| :--- | :--- |
| xep-xep <br> xep-REDUP | Two |
| e-ba-pũg |  |
| your- arm-one | Three (literally: "your (two) arms + one") |
| e-badip-dip <br> your-companion-REDUP | Four |
| pũg-põgbi <br> one-handful | Five (literally: "one handful") |
| xep-xep põgbi <br> xep-REDUP handful <br> e-ba-pũg põgbi <br> your- arm-one handful | Ten (literally: "two handfuls") |

### 1.2. Quantifiers and other expressions of quantity

[^0]| pũg-pũg pũg-REDUP | Some |
| :---: | :---: |
| xêp-xêp <br> xêp-REDUP ${ }^{3}$ | A little |
| a-de <br> a-grate | Much |
| ade sũ <br> a-grate rather | Rather much |
| ade ma <br> a-grate FOC | Really much |
| ade jijã <br> a-grate very | Very much |
| ade-de a-grate-REDUP | Very much |
| ade $\tilde{g} u$ <br> a-grate-NEG | Few (literally: "not a lot") |
| ade'-ũm <br> a-grate-NEG | Few (literally: "not a lot") |
| so-an <br> so-REL | Everything |
| so-at so-REL | All, Every |
| bit Piece-Focus (lit | Amount Amo") |
| bit-ku amount-DEM | That size |
| pe-bit <br> at-piece | Which size, quantity |
| Bu-g̃ũn Extent, size, distance, time... (typically accompanied by two-hand line-similar gesture defining a certain extent) |  |

[^1]

### 1.3. Ideophones used in narrative contexts

Kiiih or Kih Kih Kih Ideophone of variable duration, indicating a large quantity (numerosity, duration, or spatial extent). The duration of the syllable refers to the quantity depicted extent. The duration of the syllable refers to the quantity depicted.

[^2]Ideophone of variable duration, indicating a small quantity (numerosity, duration, spatial extent). The duration of the syllable refers to the density of the stimulus.

### 1.4. Ordinal words

```
ko-ap
First
indivisible-for
\begin{tabular}{ll}
\begin{tabular}{l} 
w-ap \\
w-for
\end{tabular} & \begin{tabular}{l} 
Before, ahead \\
(literally "the one (who comes) ahead")
\end{tabular} \\
\begin{tabular}{ll} 
no-mu-ju \\
from-caus-go
\end{tabular} & \begin{tabular}{l} 
After, behind \\
(literally "the one (who comes) after")
\end{tabular} \\
\begin{tabular}{ll} 
anm-ap & Last \\
end-for & (Literally "the one (who comes) at the end)
\end{tabular}
\end{tabular}
```

### 1.5. Comparatives

```
\begin{tabular}{ll}
\begin{tabular}{l} 
bo-di \\
DEM-water
\end{tabular} & \begin{tabular}{l} 
More (on the other side) \\
(literally: "over there by the water") (by extension: "more") \\
i-buxi-m \\
INDEF-doubt-Adv
\end{tabular} \\
\begin{tabular}{l} 
Close to (something) \\
(literally: "related to") \\
INDEF-see-similar
\end{tabular} & \begin{tabular}{l} 
Similar to (someone) \\
(by extension: "equal")
\end{tabular} \\
\begin{tabular}{l} 
i-waru \\
INDEF-different
\end{tabular} & Different \\
weg̃ũn & \begin{tabular}{l} 
Same quantity, number, or distance than \\
my-near
\end{tabular}
\end{tabular}
```

## 2. Geometrical terms

### 2.1 Topology

| dag̃/tag <br> d-observe/d-observe | by, through |
| :--- | :--- |
| kug̃ | In contact with |
| tog̃ | Through, by means of |
| teg̃ | Near, through |

```
wûy
Far
```

## Directional

```
kay to, in the direction of
```

Close to, by the side of, in the presence of

### 2.2 Geometry

Geometrical figures

```
i-roy-ruy-'at Spherical object (by extension "circle"
INDEF-flat-REDUP-REL (as a 2D projection of a spherical object)
i-waket-kut-'at Imperfect rounded object
INDEF-circular-REDUP-REL (by extension: "circular shape or curved square" (as a 2D projection
of an imperfect rounded object))
```

Points, lines, angles

```
ko-ap Beginning (by extension : "start")
ko-DIR
cũg Straight (ahead)
i-bu-cũg Curve, line (literally "his straight finger")
INDEF-finger-straight
etako Side
ka-di Border, side
border-water (literally "bank (of a river)")
yabi Corner, top
head (literally: " head")
yabi-ta-rûg Sharp corner; (by extension: "angle")
head-seed-rûg
yarõg inside corner
yanõg outside corner
```

```
ta-rũg-at Sharp point, tip; (by extension: "angle")
seed-rũg-REL
```

### 2.3. Metric Properties

## Proportions

```
wedip entire, complete
i'in small bit (of something) in a sequence, piece, (by extension "part")
i-son-FUT (this meaning "small bit" is directly related to the other meaning of
    i'in, which is "the next, future, child of a woman": both meanings
    presuppose a sequence of pieces/ parts).
ipi-d-ase Middle, half (literally "above the earth/ground")
earth-d-above (by extension: "(immutable) center", and "center of a circular
shape")
ipi-d-ase-su
more or less in the middle
earth-d-on-more.or.less
bi-d-ase
Middle
mouth-d-above
```

### 2.4. Gradients (defined in relation to a Vertical and Horizontal axis)

## Kaxi-je-m-ap <br> sun/moon-REFL-for

## kaxi-ac-ap

sun/moon-ac-for
kaxi-cũg
sun/moon-straight
kaxi-jodek
sun/moon-bent
kaxi-cere-re
sun/moon-bent-REDUP
kaxi-pi-teg̃

## Sun/moonrise

(literally: "the place from which the sun/moon rises")

## Sun/moonset

(literally: "the place at which the sun/moon declines"), setting.

The vertical axis that can be drawn from the sun/moon to the ground, with the sun/moon viewed as a body ${ }^{6}$ held upright (by extension, "zenith")

The slanted axis that can be drawn from the sun/moon to the ground, with the sun/moon viewed as a body in a slightly bent position as compared to its upright posture.

The slanted axis that can be drawn from the sun/moon to the ground before setting or after rising, with the sun/moon viewed as a body in a bent position close to the ground.

The horizontal axis that can be drawn from the sun/moon to the

[^3]| sun/moon-ground-close | ground, with the sun/moon viewed as a body lying on the ground, (by <br> extension "moon/sunset, moon/sunrise"). |
| :--- | :--- |
| yabi-cũg <br> head-straight | The vertical axis that that corresponds to a person or an object <br> analyzed as a body standing straight. |
| yabi-jodek <br> head-bent | The slanted axis that corresponds to a body or an object analyzed <br> as a body that is slightly bent as compared to its straight position. |
| yabi-cere-re <br> head-bent-REDUP | The slanted axis that corresponds to a body or an object analyzed <br> as a body bent close to the ground. |
| we-ta-bi-ju <br> my-eyes-mouth-in.contact | Horizon, vision (lit. 'at my eyes', at eye level) |

### 2.5. Polar Sense \& Direction (as defined with respect to a Depth axis)

## To/from

be

| (be)-wi | From (literally: "from (to)") |
| :--- | :--- |
| (from)-to |  |

Far/Not far

| bo-di <br> DEM-water | Outside, on the (other) side, par ext, far |
| :--- | :--- |
| i-jo-di | On this (my) side, par ext, near |
| INDEF-look-WATER |  |

## Opposite lateral sides

| i-ba-'at <br> INDEF-arm-REL | Literally: "at the main (i.e. right) arm of a body or object analysed <br> as a body" (by extension "on the right") |
| :--- | :--- |
| i-ba-'at kadi <br> INDEF-arm-REL side | Literally: "on the side of the main (i.e. right) of a body or object <br> analysed as a body" (by extension "on the right side") |
| i-ba-'at ũg <br> INDEF-arm-REL NEG | Literally: "not at the main (i.e. right) arm of a body or object <br> analysed as a body" (by extension "on the left") |
| i-ba-'at ũg kadi Literally: "not on the side of the main (i.e. right) arm of a body or <br> object analysed as a body" (by extension "on the left side") |  |

| dopa be <br> face at | in front of <br> (literally: "at his/its face") |
| :--- | :--- |
| yakpida be <br> nape at | behind, at the back of |
| yanõg pita be |  |
| corner- anus-at | Behind, at the back of <br> (literally: "to the anus corner") |

## Above/Below

| je-je <br> above-REDUP | All above, on the top of |
| :--- | :--- |
| ase | Above |
| um | Above, high |
| di-ot(pe) <br> water ot (at) <br> (literally: 'to the place of the water) |  |
| ya-ka-be <br> Cl-temples(at) | at his/its side <br> (literaly :to his/its temple) |
| di-ot-(pe) <br> water ot (at) | Below, under (literally: "to the place of the water") |
| ya-kaba-(be) his/its side <br> Cl-temples (at) | (literally: "to his/its temples") |

Upstream/Downstream

| ti-a-kay |
| :--- |
| water-a-to |

| de-im (literally: "to the water") |
| :--- |
| de-your foot |$\quad$ Downstream (literally: "the place from which the water comes")

### 2.6. Opposite sides (as defined in relation to a vertical axis)

i-be-ren
ind-at-desire
a-pin
a-desire

High (from the point of view of the speaker), elongated (object)

Low (from the point of view of the speaker), (short) non-elongated (object)

| kabi kadi <br> sky side | On the upper side <br> (literally: "on the side of the sky") |
| :--- | :--- |
| ipi kadi | On the lower side <br> (literally: "on the side of the ground") |
| ground side |  |

### 2.7. Adverbs and deictic (as defined in relation to an Horizontal/Vertical/Depth axis)

### 2.7.1. Directional adverbs

## Distal

| i-bo-ce <br> INDEF-DIST-PRON | Away from location of speaker, thither <br> (literally: "that place there") |
| :--- | :--- |
| (i)-bo-di Over there on that (other) side, through there <br> INDEF-DIST-water <br> i-bo-ma In that direction <br> INDEF-DIST-FOC that place there by the water") $\quad$. |  |

## Proximate

| i-jo-ce <br> INDEF-PROX-PRON | Towards location of speaker, hither <br> (literally: "on this side") |
| :--- | :--- |
| i-jo-di | Towards this place here, hither |
| INDEF-PROX-water | (literally: "this place over here by the water") |

```
i-jo-ma In this direction
INDEF-PROX-FOC
```

### 2.7.2. Directional deictics

## Distal

```
i-bo
INDEF-DIST
i-te
INDEF-coming
e
That one over there, topic of the discourse (literally: "this one moving away from the speaker")
i-te
This one who is moving away from the speaker
INDEF-coming
```

```
i-g̃o
```

i-g̃o
INDEF-on.foot

```
INDEF-on.foot
```

```
e
That one standing away in front of the speaker
(typically accompanied by a gesture defining an a vertical or horizontal axis)
The one within ear range
(typically accompanied by a vertical gesture near the ear)
```

## Proximate

i-xe
INDEF-close.DIR
i-jo(-p)
INDEF-DIST-on the ground
i-ju
INDEF-near.in my hand
i-ja
INDEF-near.my foot

The one who is moving towards the speaker (literally: "this one visible to the speaker and interlocutor")

The one (on the ground), on the side of the speaker
(literally: "that object (on the ground)")

This one on the side of the speaker
(literally: "this object here in my hand")

This one standing on the side the speaker
(literally : "this object here near my foot")

### 2.8. Shape-based classifiers

## a

di
ba In a non flexible longitudinal object form
bu In a flexible longitudinal object form
da

In a head like form
In a liquid substance form

In a rounded flat object form

| dup | In flexible flat object form |
| :--- | :--- |
| dot | In a natural conjunct form |

[^0]:    ${ }^{1}$ This work was done using the Topological Relation Pictures Series of Bowerman and Pederson (1992) supplemented by Socratic dialogs (cf; Véronique Izard, Pierre Pica, Elizabeth Spelke \& Stanislas Dehaene's (2011) supplementary material and psychophysics experiments (see Stanislas Dehaene, Véronique Izard, Pierre Pica \& Elizabeth Spelke (2006), among others).

    We thank Johan Rooryck and Jairo Saw for extensive discussions and insightful comments on the analysis of these terms. We will use the following abbreviations. ADV: adverbial, CAUS: causative, DEM: demonstrative, DIR: directional relative marker, DIST: distal, FOCUS: Focus, FUT: future marker, INDEF: indefinite, NEG: negation, PROX: proximate, REDUP: reduplication of the last syllable or a part of the last syllable, REFL: reflexive, REL relative marker.
    ${ }^{2}$ Previous research (3) has established that all terms refer to an approximate range of numerosities, with the possible exception of the first three number words, and that large number words $(\geq 10)$ are rarely used.

[^1]:    ${ }^{3}$ There are two types of reduplication. Many lexical elements are obligatorily reduplicated, such as xep-xep 'two' or je-je 'above'. In such cases, reduplication expresses number and approximation. To this type of reduplication a second reduplication can be added to express multiplicity: pũg pũg pũg "a multiplicity of individuals", xep xep xep "a large number of equivalent pairs", etc.

[^2]:    ${ }^{4}$ Whenever a meaning is provided 'by extension' in this section, it is important to underline that these meaning do not have any lexical counterparts in Mundurucu, where they correspond to lexical gaps. It is unclear at this point whether these extended meanings exist as distinct concepts for the Mundurucu.
    ${ }^{5}$ The meaning of bũrũ as "quantity" is related to its other meaning "outcome of a story, denouement, ending". In other words, the notion of quantity is related to notion of sequence. The end of a sequence is viewed as expressing the range of a quantity.

[^3]:    ${ }^{6}$ The different positions of the body can be viewed as an abstract temporal sequence.
